Education

University of Toronto Sept. 2025 – Present

BSc. Statistics Co-op, Minors in Computer Science, Geographic Information Systems *Toronto ON, CA*

- Relevant Courses: Intro to Computer Science II, Intro to Probability, GIS and Empirical Reasoning, GIS Principles and Applied Mapping

Experience

Education/Web Coordinator Oct. 2025 – Present

UTSC Sports Business Association *Toronto, ON, CA*

- Developing a full-stack club website using Next.js, React, and Tailwind CSS
- Maintaining the website and ensuring reliability, performance, and up-to-date content
- Collect and analyze sports and business data to research and write data-driven sports business articles
- Manage a database of email contacts for newsletter subscriptions and club updates

Web Designer Jun. 2026 – Aug. 2026

Muslim Welfare Canada *Toronto, ON, CA*

- Set up and documented a NAS server with RAID 5 and access controls for 100 users across 3 office locations
- Redesigned and maintained multiple website pages and templates and established brand standards applied across all digital platforms
- Collaborated with front-end developers on a React-based website overhaul

Projects

Atlas | *React, TypeScript, Mapbox GL JS, GeoJSON, Vite, CSS* Oct. 2026

- Built a global news-mapping platform in 48 hours with a team of 4 at Hack the Valley 11
- Built the core Mapbox GL JS map component in React/TypeScript which renders locations through 7 layers, with point clustering and click-to-expand
- Rendered city/region records as extents, not false pins, and split antimeridian bounds into MultiPolygons

TOQuery | *Python, FastAPI, PostgreSQL, PostGIS, Docker* Oct. 2026 - Present

- Building a FastAPI + PostGIS REST API serving Toronto data as GeoJSON
- Wrote a GeoPandas ingestion pipeline that deduplicates records, repairs invalid geometries, validates the CRS, and batch-loads into PostGIS with row-count verification
- Containerized the API and database with Docker Compose and built a Leaflet demo map that renders layers live

FBRef Stats | *Python, Requests, Pandas, Beautiful Soup* Jan. 2025

- Created and published a Python library on PyPI for scraping FBRef soccer data, with 15,000+ downloads
- Built a 12-method API across 10 leagues returning league, squad, and scouting data as Pandas DataFrames
- Parsed leaderboard tables embedded in commented-out HTML, added request throttling to keep scraping reliable, and wrote over 650 lines of documentation

GPS Bike Tracker | *Linux, Python, GeoPandas, Supabase, React, Next.js, Mapbox GL JS* Aug. 2026 - Present

- Built a Raspberry Pi GPS tracker in Python logging real-time location, speed, distance, and trip data
- Designed an offline-first system, with rides stored locally in SQLite sync before syncing to Supabase when online
- Developing a React/Next.js dashboard that renders synced routes in Mapbox GL JS and computes trip statistics (distance, average/max speed, elevation)

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS
Frameworks & Libraries: React, Next.js, FastAPI, Tailwind CSS, Mapbox GL JS, Pandas, GeoPandas, Requests, BeautifulSoup4
Databases: PostgreSQL, PostGIS, SQLite, Supabase
Dev & GIS Tools: Git, Docker, Linux, Raspberry Pi, QGIS, ArcGIS Pro, Adobe Illustrator
